Call for papers: Small-scale projects and case studies

TheStructuralEngineer

Have you recently worked on a particularly interesting ‘everyday’ project or faced an unusual technical challenge as part of a larger project?

Project-based articles

- We welcome articles describing the smaller-scale projects that make up many members’ day-to-day work, where these have thrown up interesting engineering problems.
- Articles should include an even-handed description of the technical challenges encountered during design and construction and how these were overcome.

Case studies

- We also invite shorter case studies focusing on a particular aspect of a project – large or small.
- Case studies should briefly put the project in context, then describe the problem or challenge faced and the technical solution developed. Calculations and sketches are encouraged.

Contribute by submitting a synopsis (approx 150 words) to:
